

HYDRAULIC NETS TRACTOR HAULER

The hydraulic nets tractor hauler 550 **automates** the nets hauling process. This product has to be placed behind a nets hauler with drum or behind a bulkhead drum.

Its traction system is done through an auto-centred band which ensures a strong grip whilst leaving a lot of flexibility. Boltropes of Ø1mm to Ø12mm are not distorted or damaged. This hauler can also be used to haul longlines and pots.

It has a hydraulic distributor with pressure relief valve. It is fixed onto a directional stainless steel foot and it can be locked in a specific position.

Photos non binding

Exists in PORT or STARBOARD model
