

HYDRAULIC NETS TRANSPORTER

During the turn, the hydraulic nets transporter brings **automatically** the nets from the hauler to the untying area. This product **improves your productivity and working conditions** because it removes all manual pulling efforts.

Its traction system is done through an auto-centred band which ensures a strong grip whilst leaving a lot of flexibility. Boltropes of Ø1mm to Ø12mm are not distorted or damaged. It rotates on 180° and is directional.

The product glides on a railing (not provided), made of 2 parallel stainless steel tubes Ø60mm (recommended height: 2m). This set-up enables the nets retrieval from port or starboard side and from front to back.

Built in stainless steel, aluminium and composite material, the nets transporter is has a hydraulic distributor with pressure relief valve. It has a control lever: on/ off and is also used to regulate the speed.
