Onboard high pressure cleaning machine

Can be changed into a high pressure aspiration pump

The high pressure pump is powered by its integrated hydraulic motor. This makes it a compact, light and resistant unit.

Its installation is easy: the hydraulic motor is connected on the existing circuit and the high pressure pump receives filtered salt water (filter provided). You have fit the circuit with a 3-ways tap to be used when rinsing with freshwater (i.e. unsalted).

It is possible to change the pump into a high pressure aspiration pump. Ideal for emptying or drying (option: aspiration tube kit with cone venturi ending - ref 850610).

Accessories: flat water jet pistol, circular jet, quick joint, cleaning flexible.

| REF | Model | Water flow (l/min) | Water pressure (bars) | Oil flow (l/min) | Max Oil Pressure (bars) | Weight (in kg) |
|------------|---------------|--------------------|-------------------------------|------------------|--------------------------|----------------|
| 850 | 30-150 | 30 | Variable 50 to 150 | 30 | 175 | 15 |
